not interfere so much with
irvival of the Attest as it hastens the
destruction of the entire fauna Formerly
Mr. Luons properly explains it, "through

natural causes race after race of ant
mals has disappeared from the globe.
The extermination of species by nature i
ordinarily slow, and the place of one is
taken by another, while the destruction
wrought by man is rapid, and the gaps he
Creaton remain unfilled."
There was the great auk, an uncommonly
fal and awkward bird, that positively said
to hungry sailors, "Coma, catch me, roast
Think of the godsend a
and eat me."
Ales impensla must have been, not alone
to primitive man, but to the early settlers
of Mains or Labrador. When Cartier's
bardy mariners landed off Bank faland in
1384 they made glorious feastings on the
poor fellows, dying
Vital forces with
overy mouthful of great ank they swal-
lowed. Are they to be begrudged because
they "Alled two boats full of birds as if
they had been stones, so that, besides
them which we did eat fresh, every ship
did powder and salt five or six barrels of
them."
Those Basque and other dahermen who
crossed the stormy seas for cod depended
on the luscious auk for their rations. The
number of the birds must have been count-
lass, because the auk was not a prolido
breeder, laying only one egg at a time.
Poor, stupid old bird, shaped by nature to
become fat and heavy, to find its food so
readily that is wanted no wings, and so
was killed!
It might have lasted longer as a bird if
It had not been for its fathers, Just na

When Columbus sought Copango and came across the West Indies his sailors found along the shores the seal known to day as the Monachus tropicalia. A distinguished characteristic of this seal was that it placed little or no dependance on Ita hind Hippers. Nature had overlooked or alighted

their developmer It was a seal without proper co-ordination of movement. When it wanted to go forward on the land it bad to arch its back something like a caterpil- Jar, and then after a prodigious effort its progress was less than a foot. Of course with the advent of man this West Indian was doomed.

The strange thing about this seal, so far as the collector is concerned, is this- although Monachus tropicalis was known to have existed for several centuries, not a single perfect specimen has fallen into the hands of the naturalista. Dampler in 1676 told of the abundance of these seals and wrote, "The Spaniards do often come hither (Yucatan) to make oyl of their fat." Sir Hans Sloan, who ten years after Dampier visited the Bahamas, wrote that togglands were filled with seals: "Some- inkers will catch 100 in a night mel them and bring off their Jain pa on the land Perhaps the Jast of Abens Belli in existing today, for Home were taken as late as 1886, but in ten Years from now there will be no more of Monachus tropicalis. It has served its purpose.

In the Swamp, in New York city, that quarter devoted to leather, one may oc- casionally see two men lifting into a truck what looks like heavy wooden plank, only of greater width than is cut from trees. The material is stiff and hard, and if you strike it you can appreciate how bard it is. It is walrus hide, used for baming wheels, and it is about three inches thick. The walrus of the northern Pacific is being exterminated for ita tusks, hide and oil. While whaling was profitable the walrus was passed over, but to-day it is too valuable. On the Atlantic side the chances of the walrus still existing are better, because it is much harder to get, but when the Pacific walrus becomes rare the Atlantic one will certainly be sought opthing is known today about

A Bevere Lesson
A few evenings since a fashionably dressed young couple occupied a box at one of the down town theaters. Those who were acquainted with them knew the day set for their marriage was but two weeks distant. All the arrangements for the event had been perfected-the lovers looked forward with joyful anticipation Happy couple. Seem to be especially adapted to each other" was the verdict of täctromet while rejected sultors
ROCCER Soon after they bad entered the box the young laly was seen to hold her programme in a pecullar manner, at the same time casting aly glances toward & certain portion of the parquet.
kretic and cow-the Rytina
rigas. It was related to the manatee, or dugong, only it lived far north. It was a big creature, certainly twenty-dre or thirty feet long, with a girth of from fifteen to, twenty feet, and probably an adult would weigh four tons. It had ridiculously small bead and was toothless. Its skin was supponably tough, not thick, but hard enough to resist the edge of an ax. It wa gregarious and lived at the mouths of rix ers, paaturing on seaweed. When Behring (1741) was in Kamchatka be saved bis Grew from scurry by taking sea cow. It was a creature so easy to kill that exter mination soon took place.
On Copper ialand, where Chia en cow was onos plentiful, they had become rare in 1763. The last one was probably killed on Behring island in the last quarter of the Eighteenth century. Some years a the instigation of the United States National museum, Dr. Stejneger visited Behr ing island in search of a cow skeletons and was fortunate enough to And skulls, ribe and other bones, and so today Na 1966 of the catalogue of the National Cum stands for the skeleton of the s
